

Systems Accountant - Oracle

This company is a well established business and has gone from strength to strength whilst continuing to grow. They are currently implementing a new system to deal with the ever increasing business demands and they are looking to recruit a Systems Accountant on an interim basis to assist with the project.

Reporting directly to the Project Manager, this is a busy and varied role being part of a very active project team.

Key Responsibilities:

- Design and implement strategies relating to information management and reporting
- Identify and co-ordinate system and process improvements to meet stakeholder needs
- Build and test the Oracle system
- Represent the division and its stakeholders regarding systems changes, informational and reporting requirements
- Co-ordinate aspects of financial planning for the division; including budgets, cash flowing and forecasting
- Assist in the development of policy and processes relating to financial and informational management.

Key Requirements:

To be successful in this role, you will possess the following:

- Substantial experience in Oracle systems and information management, analysis and manipulation using various tools
- Planning and organisation skills that demonstrate the ability to co-ordinate and deliver a financial management service
- Strong MS Office skills (especially Excel, with knowledge of VBA and financial modelling tools essential)
- Tertiary qualification in accounting, finance or business discipline
- Highly developed communication, interpersonal and negotiation skills, with the ability to develop and build productive relationships
- Accuracy and attention to detail are essential

Desirable Qualities:

- CPA Qualified
- Experience in a managerial position.
- Experience working within the government.
